Restorative Window Cleaning

Dilute **Split! Restorative Cleaner** at 12 oz per gallon of cold water in a small, open top bucket.

Submerge a **blue** microfiber wiper, and wring it out thoroughly.

Place just cold water in a second small, open top bucket. Submerge a **green** microfiber wiper, and wring it out thoroughly.

Starting at the top and working down in a side to side motion, with the prewet **blue** microfiber wiper, turning it over and refolding it.

Then before that is dry, repeat the procedure with the prewet **green** microfiber wiper.

Then before that is dry, thoroughly wipe dry with a clean, dry **green** microfiber wiper. Then briefly fan the area with a dry **green** wiper.

Re-submerge the **blue** microfiber wiper in the solution and wring it out thoroughly.

Re-submerge the **green** microfiber wiper in the water and wring it out thoroughly.

Repeat the above steps 4 - 6 on the next section of interior windows.

Use any two colors of microfiber wipers, as it is important to know which one has the cleaner on it. **Split!** looks and smells like water!

Place an extra wiper of each color in the appropriate bucket, so you know which one has the cleaner in it.

Only clean as large of an area as you can without it drying before you get back to rinse or dry it.
